To whom it may concern:

11/28/06

Last Christmas we contacted Tom Dean and Henry Petersen from Energy Savings LP in order to look for opportunities to help us lower our plant energy bills. Our energy bills are a substantial part of our operating expense and we are always looking for ways to reduce them. Specially for Puerto Rico which is an island and the power company is only one and is own by the government. In the last year, we have been faced with an increase of approximately 45% in our plant's energy cost. After initial discussions over the phone about which equipment to treat and a visit to our facility by Tom and Henry, we agreed to allow them to treat the plants approximately 746 tons of HVAC and refrigeration equipment with Compress Shield. Within days of treatment we noticed lower discharge temps.

Since the installation of Compress Shield in our facility in December of 2005, we have noticed an important drop in our total plant monthly KWH. Our savings calculations based on real KWH data after the installation of Compress Shield have shown to us that Compressed shield have been able to provide us with 100 % Return of Investment in just one 1 year. We are very please with the results obtained with the product and would recommend Compress Shield for any business that is looking to reduce their energy bills and restore the efficiency of their equipment.

Sincerely,

Jose L. Maiz
